How Ellab turned multi-country EAC work into a single audit-ready process

Ellab brought multi-country certificate cancellations, statements and traceability data into one audit-ready system.

6 countries

United States, Italy, UAE, France, the Netherlands and Singapore covered.

One process

Country-level consumption, company details and cancellation documents connected end to end.

Registry proof

Statements and traceability data available in one system.

Six countries, one audit-ready process

- 01 Where it started:** Ellab needed EAC cancellations across six operating companies, with registry-sourced documentation that could be independently verified.
- 02 The friction:** Each market meant different entity details, volumes and registry routes, creating the kind of context-switching that makes audit work harder.
- 03 How Soldera helped:** Soldera pulled countries, consumption data, company details, transactions, audit trails and exports into one hosted workspace, visible to Ellab at every stage.
- 04 The outcome:** Ellab completed certificate cancellations across six countries. Statements and traceability data now sit in one system, reducing browser-tab work across regional reporting rules.

“For Ellab, the value was in having a single procurement channel across multiple markets, with structured delivery, responsive support, and high-quality documentation.”

**DANIELE COSTANTINI**GLOBAL HEAD OF SUSTAINABILITY AT
ELLAB

“Enabling a compliance-focused client to perform a full set of multi-national 2025 cancellations through one system is a clear demonstrator of what Soldera's infrastructure can achieve.”
