How Energy Solutions Group brought complex Belgian GO operations into one operating layer

Energy Solutions Group centralized fragmented Belgian GO workflows across regions, SPVs, contracts, and registry requirements with Soldera.

3 registries

Flanders, Brussels and Wallonia brought into one operating view.

SPV visibility

Portfolio assets, commitments and available volume tracked cleanly.

Monthly sales

Operational complexity turned into a repeatable workflow.

Four registries, one workspace

- 01 **Where it started:** ESG, the largest independent green-energy producer in the Benelux, needed one source of truth for devices, SPVs, certificates and revenue, plus a unified sales channel.
- 02 **The friction:** Belgium is the only country in Europe with four GO issuing bodies. ESG's assets spanned three of them (Flanders, Brussels and Wallonia), held across multiple SPVs.
- 03 **How Soldera helped:** Soldera mirrored every registry's behaviour in one workspace: full visibility of SPVs, configured signed deals, and a clean split between committed and available volume.
- 04 **The outcome:** One workspace for Belgian GO management, with total visibility over which certificates are committed, available, awaiting issuance, or tied to delivery.

“The platform gives us portfolio-wide visibility and lets us self-manage where we need to. We don't see a comparable solution on the market for complex renewable asset management.”

HENDRIK THIJS
HEAD OF ASSET MANAGEMENT AT ESG

“It's always insightful to observe the needs of leading renewable producers in real time, and it makes our product better by the day. In the end, Soldera proved that our platform can integrate with any renewable energy registry.”

STENVER JERKKU
FOUNDER & CEO OF SOLDERA
